Work completed this week

This week, we designed the UI wireframes for the main pages of the Quick Bite Restaurant System. The wireframes were created to represent the layout and structure of the user interface before implementation.

We designed the following main pages:

- Login Page
- Admin Dashboard
- Add Product Page

In addition, we created a User Flow diagram to illustrate how users navigate between pages in the system, including login, browsing, adding items, and completing actions such as saving or submitting data.

The designs focused on simplicity, usability, and consistency with the overall system structure.

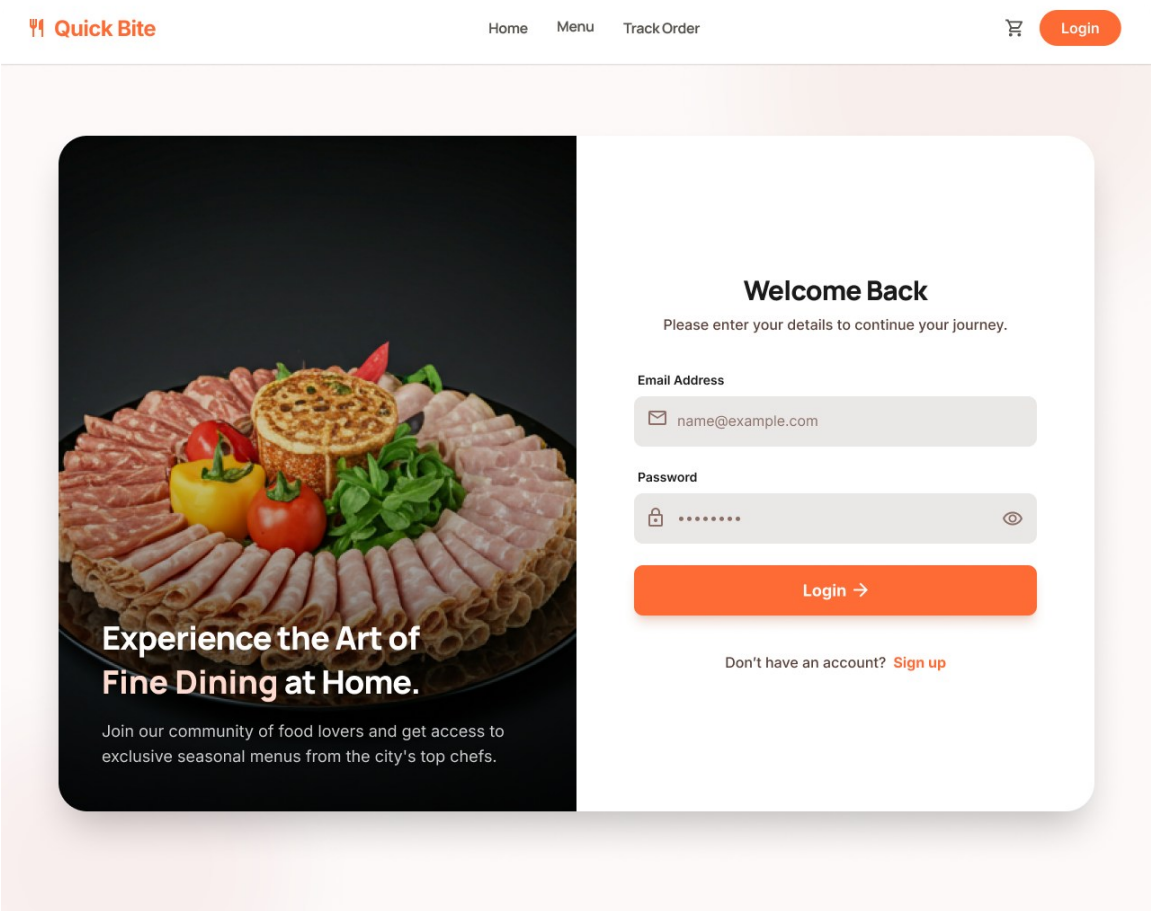

Figure 1: Login Page Wireframe

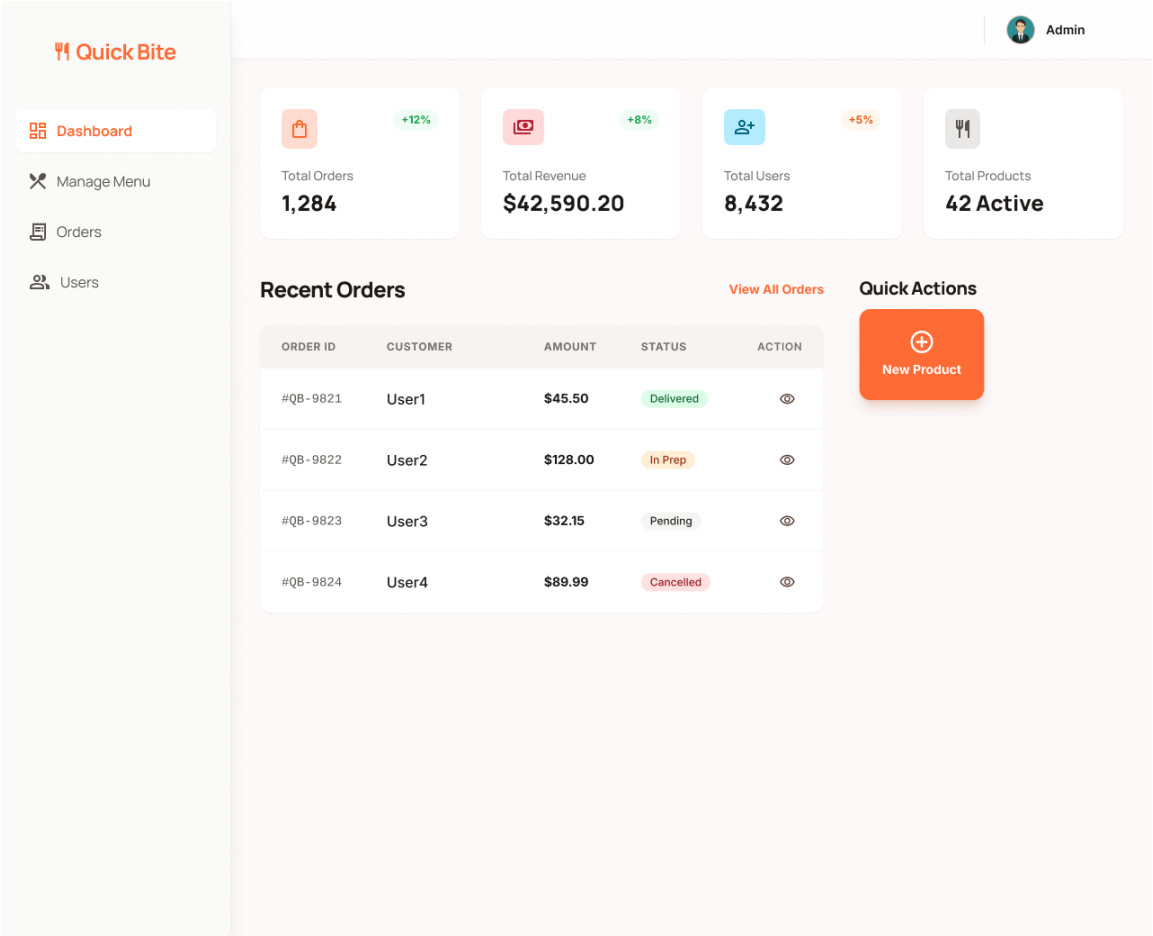

Figure 2: Dashboard Wireframe

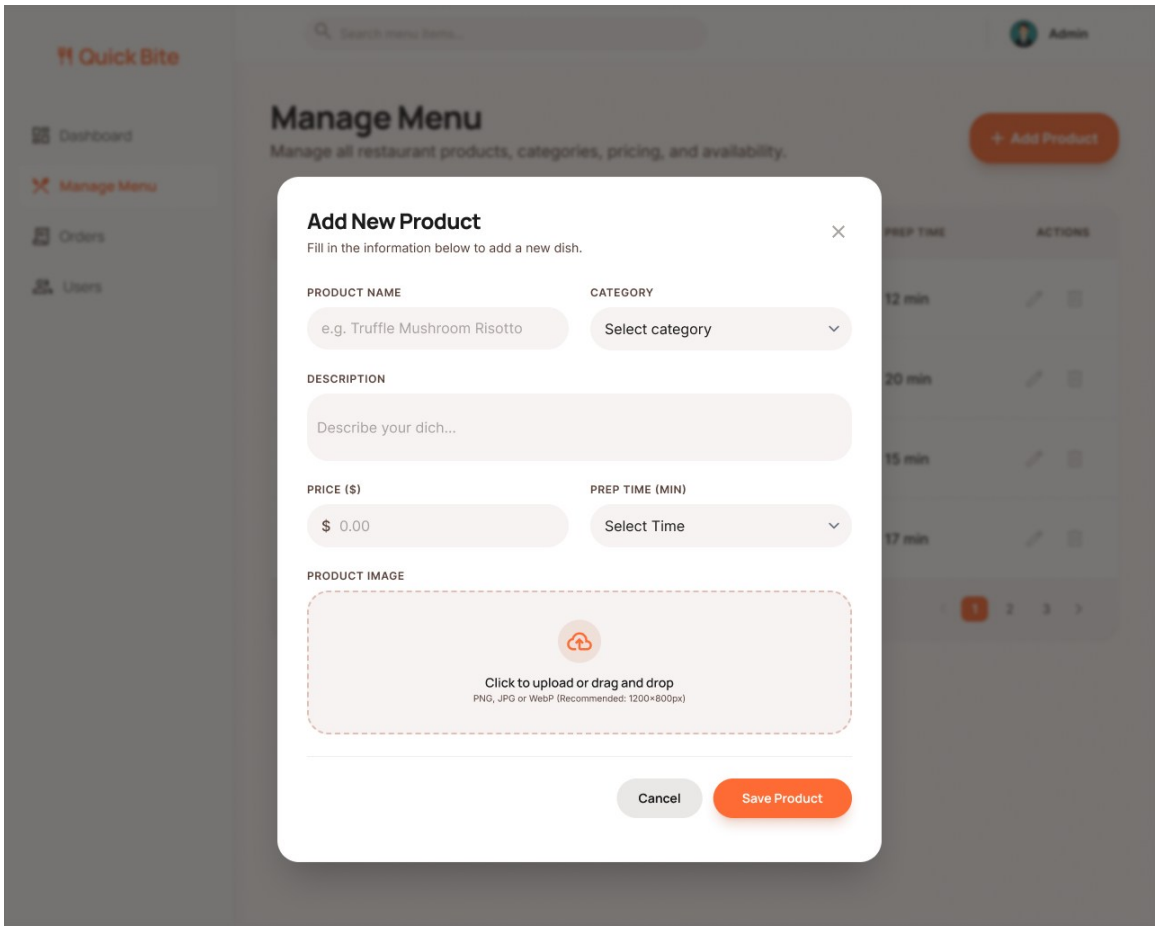

Figure 3: Add Product Wireframe

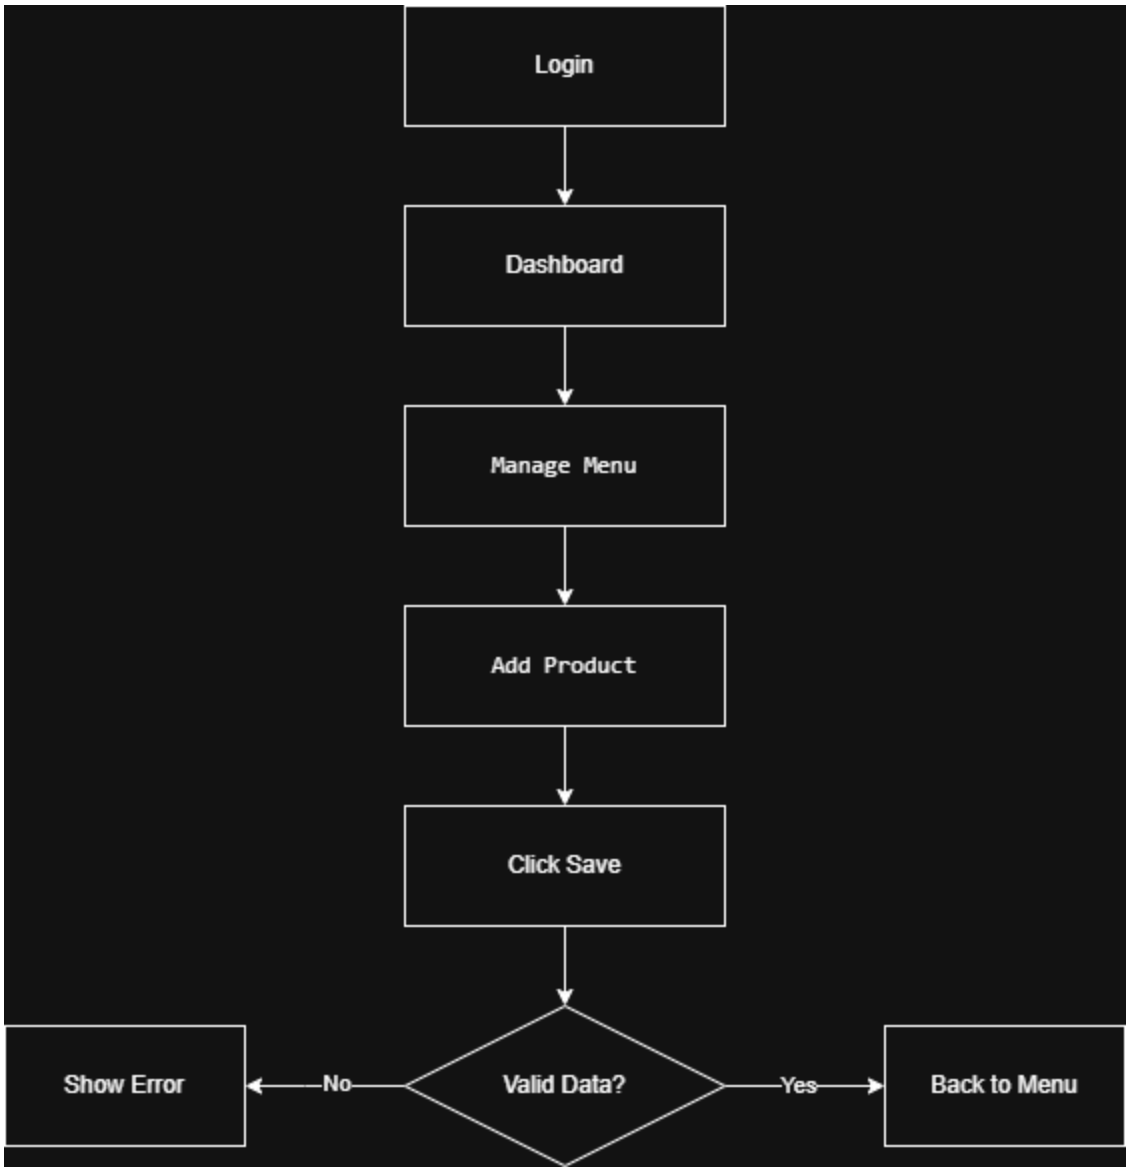

Figure 4: Admin User Flow for Adding a Product

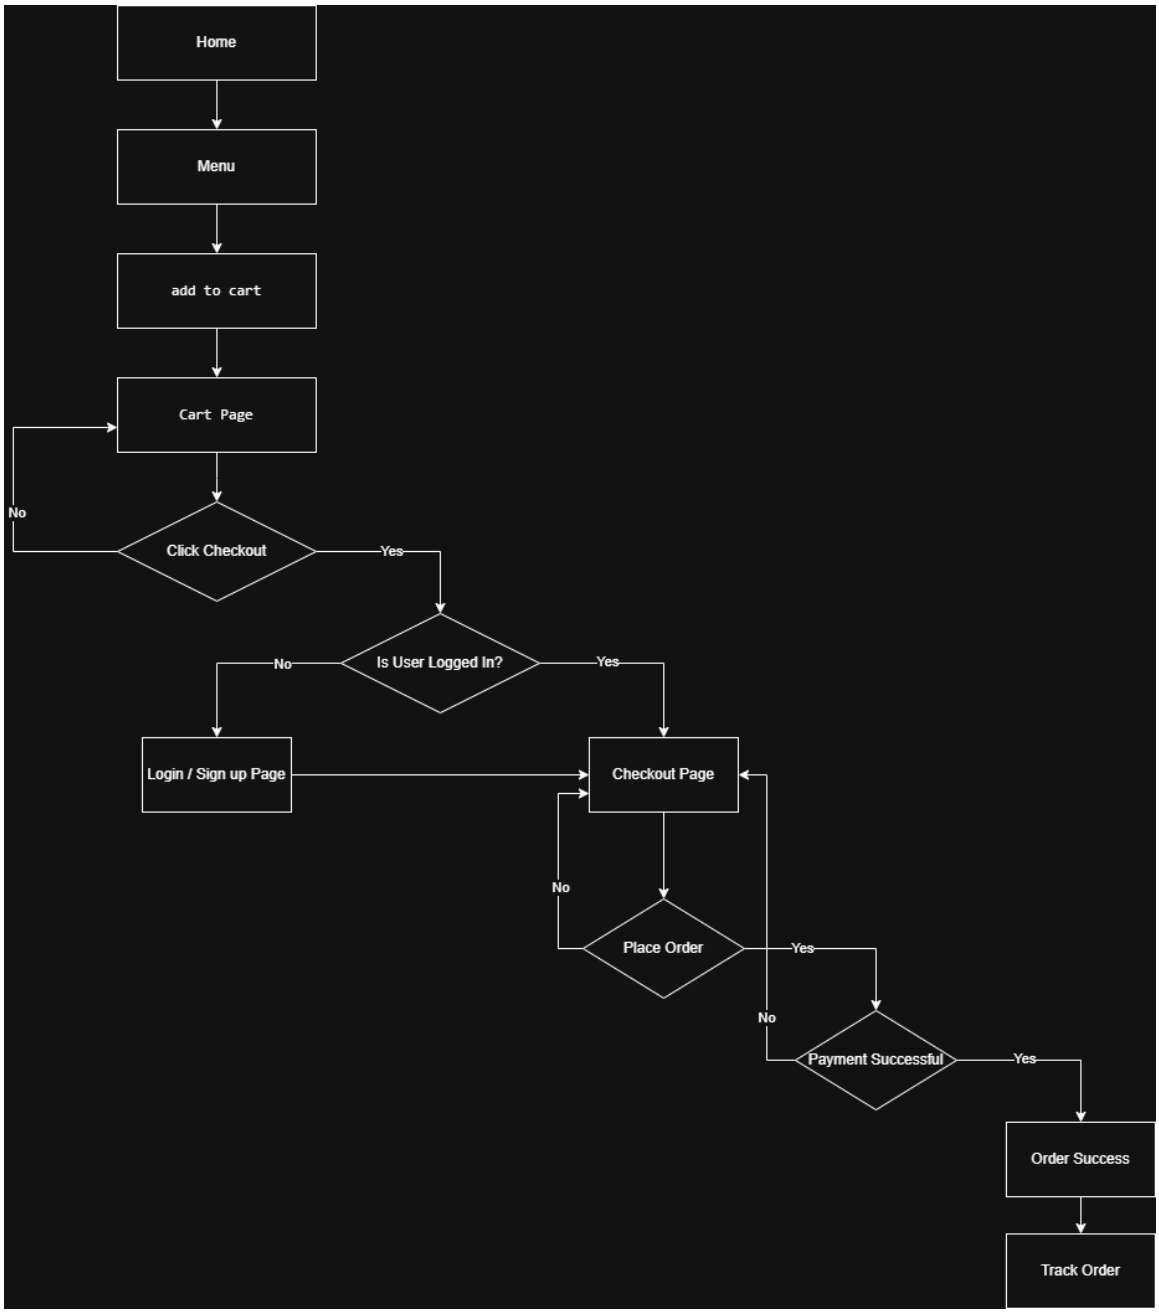

Figure 5: Customer User Flow for Ordering Products

Features implemented

The following UI features and pages were designed this week:

- Login page interface with email and password fields
- Admin dashboard layout with summary cards and quick access sections
- Add product page with form inputs (name, category, description, prepare Time, price, image)
- Navigation structure between pages (navbar / sidebar)
- User flow diagram representing system navigation
- Basic UI structure for consistency across pages

Problems encountered

We faced some challenges in deciding the layout and structure of the main pages, especially the dashboard and product management pages. It was also difficult to ensure consistency between user and admin interfaces.

Additionally, we needed to decide how users would navigate between pages in a simple and logical way, which required careful planning of the user flow.

Solutions applied

To solve these issues, we followed modern UI design practices and kept the layouts simple and clean. We used consistent design elements such as cards, buttons, and spacing across all pages.

We also created a clear user flow diagram to define navigation between pages, which helped in organizing the system structure and improving usability.

Plan for next week

Next week, we plan to start implementing the frontend using React based on the designed wireframes. We will convert the UI designs into actual components and begin building the core pages of the system.

We will also continue updating the GitHub repository with the latest progress.

Questions for instructor

No questions at this stage.
